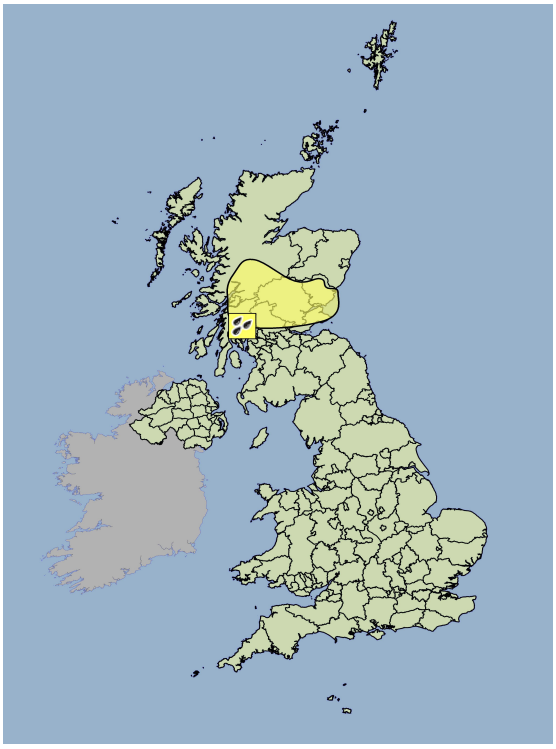
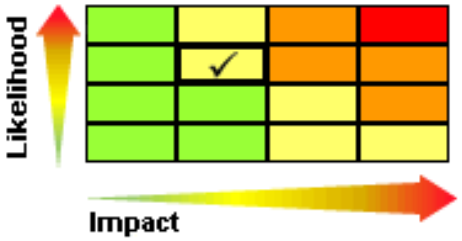
National Severe Weather Warning Service





Chief Forecasters Assessment
A low pressure system crossing Scotland will bring further wet weather through Friday until finally clearing during the evening. The highest rainfall accumulations are expected to be across parts of western and central Scotland at first, extending to some eastern areas during the day, though there is still some uncertainty about locations likely to see the most rainfall.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **11:00 on Fri, 03rd May 2013** until **23:55 on Fri, 03rd May 2013**

Outbreaks of heavy rain will continue across northern Argyll, Lochaber and western Central, extending east across the rest of Central, Tayside, Angus and Fife this afternoon. The public should be aware that there is a risk of localised river and surface water flooding. The rain will become lighter through Friday evening.

This warning updates the alert originally issued on Wednesday, and the warning issued on Thursday.
